

THE ADHESIVE · EVERY TIMBER INSTALL

The glue, in plain words.

Every timber floor we lay is bonded with MAPEI Ultrabond ECO 995, and it is already included in the price on your quote. This page is the plain English summary of what sits under your boards, drawn from the manufacturer's technical data sheet, which is available in full whenever you ask.

Three jobs in one trowel bed.

ECO 995 is a moisture barrier, a sound reducer and a premium adhesive in a single application: a 100% solids, one component, moisture curing urethane made for every type of wood flooring. Laying one product that does all three jobs is what current best practice looks like, and it is how we reduce moisture related risk and noise transfer in one pass.

MAPEI ULTRABOND ECO 995 TECHNICAL DATA SHEET · MOISTURE CONTROL, SOUND REDUCTION, BONDING

A bond warranted for life.

The maker stands behind the bond with a lifetime bond performance warranty. Under a rigid engineered board that matters: the trowel ridges hold their shape as the boards are seated, and the cured bond holds the floor secure for as long as it is down.

LIFETIME BOND PERFORMANCE WARRANTY · PER THE MANUFACTURER'S DATA SHEET

Easy on the air in your home.

A low odour formula with negligible volatile organic compound content, built on rapidly renewable raw materials and no added solvent. The gold standard glue of our industry does not need to smell like it.

NEGLECTIBLE VOC CONTENT · NO ADDED SOLVENT · PER THE DATA SHEET

Included in your price.

The adhesive system is part of the number on your quote, not an extra line to be surprised by. If your project needs the soundproofing system as well, that is quoted separately and explained on its own page.

INCLUDED WITH EVERY ATS DESIGN TIMBER QUOTE
